

Creating dispatchable renewable energy and abating harmful methane gas

Landfills across Australia have the potential to be at the forefront of our clean energy future. The biogas generated naturally at these sites can power our homes today!

LGI collaborated closely with the ACT Government to design, install, operate, maintain (and recently upgrade) a 4MW renewable hybrid power station in our nation's capital. In addition, this site features a siloxane removal system (SRS) integrated with the power station as pioneered by LGI in Australia. It's turned the Mugga Lane Resource Recovery Centre into an energy generation and carbon abatement powerhouse.

Focused on dispatchable, renewable energy on the distribution network, where and when it's needed has been the goal.

Here are the stats so far*

Biogas
Captured m3
95.1 million

Energy generated
**110 GWh since
June 2020**

Carbon Credit Units
generated
97 thousand

CO2 emissions reduced
903 thousand tonnes

EXPANSION NEWS!

LGI designed, built and operates the new 4MW power station, commissioned in June 2020. The site is being upgraded to a renewable hybrid with 50% more generation capacity and a 20MW grid connection in 2024 and a 12MW battery energy storage system (BESS) in 2025.

Once complete, the Mugga Lane Resource Recovery Centre will have the capacity to generate 50,000 MWh of dispatchable energy, enough to power 10,800 homes in the ACT for a year.

**That's the equivalent of
planting 15 million seedlings over
the next 10 years!**

When organic waste decomposes, it releases various gases into the atmosphere. One of those is methane, which is 28 times worse for climate change than carbon dioxide.

Capturing and processing landfill biogas transforms this waste into a valuable resource — energy. The Mugga Lane power station alone produces more than 35,000 MWh of green electricity a year.

Landfills will be part of the waste management system for many more years and even if they all closed tomorrow, they'll keep producing harmful methane gas for decades. However, we can and should minimise their impact on the environment and turn them into a positive by making 100% renewables possible sooner.

FOCUS YOUR ENERGY

www.lgi.com.au | Ph 07 3711 2225

* Results Achieved to November 2023

FOCUS YOUR ENERGY

- ✓ Provides renewable energy
- ✓ Reduces greenhouse gas emissions
- ✓ Best practice landfill management
- ✓ Reduces landfill odours
- ✓ Improves air quality
- ✓ Reduces demand for fossil fuels
- ✓ Stabilises the local electricity system
- ✓ Stores energy in batteries for efficiency

Mugga Lane is one of the largest facilities in our portfolio. Because Australia will continue to rely on landfills for the foreseeable future, we must do everything we can to reduce the emissions that they generate.
